

"SUPER-SCALES" are the hit of EVERY launch site!

Exact in every detail and built from super-lightweight materials . . . these big impressive model rockets steal the show every time!!

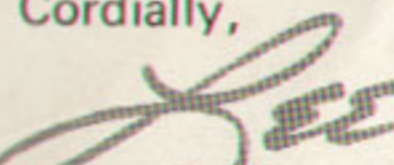

Dear Modeler:

From time to time in every field of human endeavor, a substantial breakthrough really occurs. This event changes the thinking and attitudes of many people. Recently, such a breakthrough happened in Model Rocketry. We at CENTURI are proud and happy to be a part of it. We are referring, of course, to the new Super Scale line of flying model kits introduced a short while ago.

The response to the Super Scale line has been nothing short of terrific. If you are one who has built one, we extend our thanks for your enthusiasm. If you are new to the hobby, we invite your careful comparison with any other scale rocket kit on the market today.

Your friends at CENTURI have put all their efforts and talents together to bring you the very finest quality Model rocket kits available anywhere. We hope you will like them.

Cordially,

Leroy E. Piester
President

★ 1 SATURN V

A real detailed model of the Apollo program workhorse. This flying model of the world's most powerful rocket is an interesting challenge for any model rocketeer. Almost 4 feet tall the Saturn V draws admiring crowds from all over the launch range. Powered by 3 engines and recovered by 3 parachutes, it is a model you will be pleased to build and proud to display.

★ 2 SATURN 1B

This detailed replica of the pioneer Apollo booster is a top flight performer. The Saturn 1B tips the scales at less than 5 ounces employing technological breakthrough in molded plastic parts, corrugated plastic body skin, and pre-formed detail parts. Scale detail and contrasting markings will draw praise and sighs of envy from your friends, teachers, and schoolmates.

★ 3 LITTLE JOE II

This 1/45 scale version of the famous booster used by NASA to test Apollo capsules before Saturn, is an important member of the Super-Scale family. Almost 2 feet tall, this glistening, detailed flying model will hog the attention on any launch rack. Using the latest CENTURI-developed construction ideas in aluminum foil and plastic, Little Joe II is a contest winner.

★ 4 NIKE-SMOKE

This realistic replica of a famous NASA rocketsonde is impressive at rest or in flight. Nearly 2 feet tall, this sleek beauty, with its breakthrough-design plastic nose cone, is a super scale flying model which makes you the envy of other rocketeers. The slow lift-off followed by arrow-straight flight to high altitudes is capped off by recovery on a colorful 20" chute.

★ 5 GERMAN V-2

This is a collectors item. A highly-accurate, skillfully detailed replica of the famous German V-2 will be a proud addition to your display and flying collection. The V-2 lifts off the launch pad realistically and streaks skyward like its full-scale brother. You will be pleased with the ease of construction, professional and realistic appearance, and outstanding flight performance.

★ 6 LITTLE JOE II

The 1/100 scale version of Little Joe II is affectionately dubbed "Baby Joe" by CENTURI Rocketeers. Design and construction techniques make Baby Joe a cinch to build. No painting is required. Plastic and metallic foil construction yields a small scale model of unbelievable detail accuracy and superior flying characteristics. It flashes straight up out of sight and recovers safely.

Have your Dad buy you one for your Birthday!

the amazing POINT

Build it...Watch it Fly...And Wonder Why!

When we designed this one they sat down and laughed...for a while any way. Now its our turn to smile...and yours too if you take this little bird out to fly! It won't set any altitude records but you can be sure it'll be the talk of the launch area after your first flight...that is if they'll let you have it back.

\$150
